# 5<sup>th</sup> LUNG CANCER Network

«From the Bench to the Bedside»

January | 18 - 20 | 2018 - Hilton Athens | Greece

21 CME-CPD points  
from the Panhellenic Medical Association

## SCIENTIFIC PROGRAM

## Invitation Letter

The recent, increasing amount of knowledge regarding lung cancer, especially in the field of basic science, holds promise for personalized treatment of these patients that would provide more effective and less toxic therapeutic approaches, improving the prognosis of the patients with thoracic malignancies. On the other hand, the immense bulk and the rapid recycling of the new information makes difficult its understanding, evaluation and interpretation by the clinicians. Therefore, the «translation» of our recently acquired knowledge from the lab bench to the bedside is neither smooth nor is it without obstructions, due to the existing «gaps» in our understanding and the often contradictory «signals» from clinical trials.

The success of our four previous meetings has prompted us to organize the **5<sup>th</sup> Lung Cancer Network «From the Bench to the Bedside»**. Our aim is to narrow the distance between the bench lab and the patient's bed, between the clinical trials outcome and the routine practice, by bringing together basic scientists, clinical researchers and lung cancer specialists. Our multidisciplinary, international faculty will present the latest clinical data and provide treating physicians with practical information regarding the clinical significance of the histological, molecular and genetic profile of the tumor and how the implementation of targeted agents in the therapeutic algorithm changes the clinical practice of lung cancer patients.

Finally, we anticipate that our meeting, with the presence of our distinguished faculty, would provide the opportunity and motivation for discussions regarding the emerging therapies and set the pavement for the future research and strategies towards the personalized treatment of lung cancer patients.

We cordially welcome you all in Athens in January 18-20 2018 for a stimulating, innovative and educational meeting.

## Learning Objectives

At the end of our educational meeting, the participant will be able to:

- Recognize the clinical significance of molecular genotyping of lung cancer patients
- Understand the molecular pathways that hold promise for therapeutic intervention in lung cancer patients
- Update of Immunotherapy strategies for lung cancer
- Discuss the optimal methodology of evaluation of response in the era of translational research
- Recognize the importance of a multidisciplinary approach to the care of lung cancer patients
